**Подготовить задание к уроку, который состоится после карантина.**

**Подготовить чтение и перевод текста.**

**1.Письменно переведите текст на русский язык.**

**My future profession is a computer programmer.**

The college I attend is one of the best technical colleges in the region. It runs full-time and part-time departments. I am a second-year student of the programming department. I will become a computer programmer. To become a good specialist in programming one must know many sciences, such as mathematics, IT, computer systems, computer languages and others. It is very important for a specialist in programming to be a skilful user of computers and to speak at least one foreign language. It should better be English as it is the most popular language of international communication and technical terms.

Our studies begin at 9 a.m. We have 3 or 4 double periods a day. We have lectures, practice (tutorials) and do laboratory works. The academic session begins on the first of September and ends in June. Our college trains well-educated specialists and I am proud of our college.

My future profession of a programmer requires a lot of knowledge, skills and abilities

Programmers use hardware, software, networks, servers, and other technologies to control and store data. It is important to understand that the work of a programmer can be various: some of them work in a small agency, others - in a huge company, and others are freelancers or have their own business. I would like to work for a big company.

In order to be successful in my profession, you must have certain skills and personal qualities. The most important of them are the following: the ability to think logically, to be brave and quick to solve difficult problems, to be patient and communicative.

I want my future job to be interesting and well-paid. I would like to combine a good, satisfying job with a high salary.

There are some advantages in profession of a computer programmer: relatively high level of wages, growing demand in the labor market, continuous training; companies often welcome professional growth of their employees and pay for trainings, usually quiet and comfortable in the office or at home (I can work remotely), the work is often interesting and creative; The negative aspects of this profession include: sitting in front of a computer screen for the whole day, work can be boring and hard.

Taking into account all advantages and disadvantages, I came to the conclusion that the profession of computer programmer offers great opportunities, because our society is connected with the development of information technologies. I hope I will achieve my aim to become a good specialist if I continue to work hard.

**2.Письменно ответьте на вопросы к тексту.**

- 1 .What departments does the college run?
2. What sciences must a student know to become a good specialist in programming?
3. What foreign language is the most popular for a programmer ?

4. What do programmers use in their work?
5. What personal qualities must programmers have?
6. What advantages are there in the profession of a computer programmer?
7. What disadvantages are there in the profession of a computer programmer?
